  TITLE     Sphingosine-1-phosphate as a ligand for the G protein-coupled
            receptor EDG-1
  JOURNAL   Science 279 (5356), 1552-1555 (1998)
  MEDLINE   98155258
COMMENT     REVIEWED REFSEQ: This record has been curated by NCBI staff. The
            reference sequence was derived from AF233365.1, M31210.1.
            On Feb 21, 2001 this sequence version replaced gi:4503454.
            Summary: The protein encoded by this gene is structurally similar
            to G protein-coupled receptors and is highly expressed in
            endothelial cells.  It binds the ligand sphingosine-1-phosphate
            with high affinity and high specificity, and suggested to be
            involved in the processes that regulate the differentiation of
            endothelial cells.  Activation of this receptor induces cell-cell
            adhesion.
            COMPLETENESS: complete on the 3' end.
